## Network/Host Information

### Your IP/Hostnames

Gateway: 10.0.0.1

Subnet Mask: 255.0.0.0

**Laptop:** 10.0.3.# / no hostname

**IdP:** 10.0.1.# / idp#.example.org

**SP:** 10.0.2.# / sp#.example.org

Altsp#.example.org

### Class Servers

**IdP:** testidp.example.org

**SP1:** testsp1.example.org

**SP2:** testsp2.example.org

**Discovery Service:** ds.example.org

## Installfest VMWare Image Description

### Operating System

Version: CentOS 5

**Root Password:** password

SSH access; root login allowed

### Apache HTTPD

**Configuration Location:** /etc/httpd

**Start Script:** /etc/init.d/httpd start

**Stop Script:** /etc/init.d/httpd stop

What has been done so far:

- AllowOverride AuthConfig options added to cgi-bin directory

### Apache Directory Service

**Hostname:** 10.0.1.#

**Port:** 10389

**Start Command:** /etc/init.d/apacheds start default

**Stop Command:** /etc/init.d/apacheds stop default

**BaseDN:** ou=people,dc=example,dc=org

**Admin DN:** uid=admin,ou=system

**Admin Password:** password

### Java

**Location:** /opt/jdk

What has been done so far:

- No changes made to the default installation

### Java Servlet Container

**Location:** /opt/tomcat

**Start Script:** tomcatStart

**Stop Script:** tomcatStop

What has been done so far:

- Created directory conf/Catalina/localhost
- Add user “student1” with password “password” and role “user” to tomcat-users.xml
